Career Focus

Building a professional career in Finance and Business Analytics by turning raw data into actionable insights that support decision-making.

Professional Summary

Data-driven accounting professional with hands-on experience working with complex financial data, reconciling records from multiple sources, identifying discrepancies, and preparing and interpreting financial reports. Transitioning into Data Analytics to apply financial analysis thinking to deeper data exploration and visualization, with the goal of becoming a professional Data Analyst.

Professional Experience

Employment History

Jan 2018–May 2019: Phan Hop Thanh Do Co., Ltd. – *Accounting & HR Staff*
Aug 2019–Dec 2022: Thien Nam Law Co., Ltd. – *Accountant, Tax Advisory Services*
Jan 2023–May 2024: Tieng Song Co., Ltd. – *Accountant*
May 2024–Aug 2025: IIG Vietnam Co., Ltd. – *Accountant*

Relevant Experience

- Prepared and analyzed financial statements, with a strong understanding of the relationships among the balance sheet, income statement, and cash flow statement. Cross-checked reports, interpreted financial figures, and monitored period-over-period changes in key metrics.
- Managed and processed accounting data for multiple clients; consolidated data from multiple sources; reviewed invoices and supporting documents; identified discrepancies, traced root causes, and ensured consistency and accuracy across financial records. Built and improved Excel workbooks to automate workflows and reduce manual errors.
- Explained and clarified financial data for clients without accounting backgrounds and for government authorities, including tax and social insurance agencies.
- Presented financial data for management by translating accounting records into KPI and cost-control insights. Built dashboards and recurring reports for team leaders.

Projects

(1) Sales Dashboard & Performance Analysis Power BI DAX Excel/CSV

[Project link](#)

- Built an end-to-end e-commerce dashboard to track KPIs for revenue, orders, customers, AOV, freight cost, and review score.
- Standardized multi-table data, designed the data model, and created DAX measures for analysis by time, region, and product category.
- Founded freight cost at 14% of payment value linked late deliveries to lower review scores, recommended logistics optimization.
- Improved KPI visibility, enabling tighter operating-cost control and faster decision-making.

(2) E-commerce Fraud Detection Python Pandas XGBoost Scikit-learn

[Project link](#)

- Developed a fraud detection model on a 1.47M-record dataset with severe class imbalance.
- Applied under-sampling, class weighting, and XGBoost to improve detection of fraudulent transactions.
- Achieved 68.8% recall and 0.378 PR-AUC, supporting a review-first strategy for high-risk transactions to reduce missed fraud cases, limit fraud losses, and optimize risk-control resources.

(3) Customer Churn Prediction Python Pandas Scikit-learn Imbalanced-learn

[Project link](#)

- Built a churn prediction model with a full preprocessing pipeline, including encoding, scaling, and threshold tuning aligned with the Precision–Recall trade-off. Applied class weighting and SMOTE/SMOTEENN to address class imbalance.
- Identified high-risk segments, including low-activity customers, high-balance customers, and customers with few products.
- Recommended prioritizing retention by churn probability to improve campaign efficiency, reduce churn, and protect revenue.

Education & Training

Bachelor's in Accounting / 2014 - 2018

Ton Duc Thang University, Vietnam

GPA: 7.8/10.

Data for Everyone / Aug 2025 - May 2026

MindX

Practice-based training program focused on data analytics in business contexts, complemented by self-directed project work and a hands-on portfolio built with Python, SQL, and Power BI.
