Professional Summary

Accounting professional transitioning into Data Analytics, with 6+ years of experience in financial data validation, reconciliation, reporting, and KPI monitoring. Hands-on experience using SQL, Power BI, Python, and Excel to clean and transform data, develop dashboards, analyze business performance, and communicate actionable insights. Combines strong financial domain knowledge with practical analytics skills to support data-driven operational and financial decisions.

Skills

Microsoft Office:	Excel, Word, PowerPoint
Programming:	SQL (JOIN, CTE, Window Functions, Subqueries), Python
Visualization:	Power BI, Python (seaborn, matplotlib)
Machine Learning:	Linear/Logistic Regression, Decision Tree, Random Forest, XGBoost
Git:	Version control, collaboration
Analytical Skills:	EDA, Data Cleaning, KPI Tracking, Financial Analysis, Anomaly Detection, Dashboard Design
Business Domain:	Accounting, Tax Reporting

Projects

(1) Apple Product Pricing Analysis (2020–2026) [SQL](#) [Power BI](#) [Project link](#)

- Built a SQLtoPower BI workflow: used SQL to create dimension tables such as dim_date, dim_product, dim_event, and dim_platform, plus fact tables from raw pricing snapshots, then built a Power BI dashboard to analyze lifecycle pricing using 80,000 snapshots, discount dynamics, and campaign effectiveness across 31 Apple models.
- Quantified lifecycle markdown behavior: discount rose from 7.08% (0–6 months) to 33.44% (25+ months), while average price decreased from about \$900 to about \$600 after month 37.
- Measured event impact through a +13.41pp discount lift (20.30% to 33.71%), identified Big Billion Days as the strongest event (+16.72pp), and recommended category-specific actions (maintaining Mac premium positioning longer and accelerating late-lifecycle Watch/iPad promotions) to support more margin-efficient promotional planning.

(2) Sales Dashboard & Performance Analysis [Power BI](#) [Excel/CSV](#) [Project link](#)

- Built a Power BI dashboard with DAX measures to monitor revenue, orders, Average Order Value (AOV), freight cost, and customer review scores by time, region, and product category.
- Found that freight cost represented 14% of payment value and that late deliveries were associated with weaker review scores, indicating a clear cost-to-service trade-off.
- Translated these findings into operational priorities (logistics optimization and delivery-service level control), providing clearer KPI visibility for weekly decision-making and cost control.

(3) E-commerce Fraud Detection [Python](#) [Project link](#)

- Built an XGBoost fraud detection model on 1.47M transactions with severe class imbalance, using under-sampling and class weighting to prioritize fraud capture.
- Fraud rate was around 5%, indicating severe class imbalance; therefore, model evaluation prioritized Precision, Recall, F1-score, and PR-AUC instead of accuracy.
- Achieved 68.8% recall and 0.378 PR-AUC, demonstrating the model's ability to capture fraudulent transactions in a highly imbalanced dataset.
- The model reduced estimated loss by about 84.39% versus a no-model baseline, showing that the benefits of preventing missed fraud outweighed the manual review cost of false positives.
- Proposed a review-first triage strategy for high-risk cases to prioritize manual investigation of transactions with the highest predicted risk and reduce potential missed fraud.

(All project figures are based on learning datasets, not real-world transactions; therefore, all proposed handling scenarios are based on personal assumptions.)

Professional Experience

Employment History

Jan 2018–May 2019: Phan Hop Thanh Do Co., Ltd. – *Accounting & HR Staff*
Aug 2019–Dec 2022: Thien Nam Law Co., Ltd. – *Accountant, Tax Advisory Services*
Jan 2023–May 2024: Tieng Song Co., Ltd. – *Accountant*
May 2024–Aug 2025: IIG Vietnam Co., Ltd. – *Accountant*

Relevant Accounting and Financial Data

- Managed large volumes of accounting data (invoices, receivables, payables, cash/bank entries, payroll- and tax-related records) and maintained data integrity through daily validation, reconciliation, and consistency checks across systems and supporting documents.
- Consolidated data from multiple sources into standardized reporting structures; cleaned and transformed raw records to ensure completeness, consistency, and traceability before month-end and regulatory reporting.
- Investigated data discrepancies by comparing accounting software outputs with bank statements, tax schedules, and stakeholder records; traced root causes, corrected source-level issues, and documented reconciliation logic to improve repeatability.
- Prepared and interpreted financial statements with strong understanding of relationships among balance sheet, income statement, and cash flow statement; monitored period-over-period movement in revenue, expenses, receivables, and cash positions to highlight unusual changes.
- Built and improved Excel-based reporting files (Pivot, lookup and aggregation formulas, structured templates) to automate recurring tasks, shorten reporting cycles, and reduce manual input errors.
- Delivered recurring KPI and cost-control reports for managers and team leaders; translated financial data into clear business context for non-accounting stakeholders to support follow-up actions and operational decisions.

Education & Certifications

Ton Duc Thang University, HCM City

2014–2018

Bachelor's in Accounting – GPA: 7.8/10

MindX Technology School

Aug 2025–May 2026

Data for Everyone–Business Data Analytics Program

Practice-based training program focused on data analytics in business contexts, complemented by self-directed project work and a hands-on portfolio built with Python, SQL, and Power BI.

TOEIC Listening & Reading: 700
